Traditional/Non-integrated Clinical Management

ADL/Essential Job Tasks Criterion (Physical, Cognitive, Socialemotional)

Pre-condition Functioning

Illness Onset

Sporadic Active Treatment

Rare Vocational Rehabilitation

Measuring Progress Towards Max ADL & Essential Job Task Criterion
RIHM Integrated Clinical-Vocational Intervention

Illness Onset

Pre-condition Functioning

Essential Job Tasks Criterion (Physical, Cognitive, Socioemotional)

Integrated Active Treatment

Vocational Rehabilitation

ROMS Measures Progress Towards Essential Job Task Criterion
Outcome Guided Rehabilitation Intervention Stages

1. Rehab Baseline: Barriers & Disability Profile
   - Neurological assessment
   - Orthopedic assessment
   - Psychological assessment
   - Social work/family assessment
   - Sleep assessment
   - Headache assessment
   - Dizziness, substance abuse vs. anxiety/panic attacks
   - Vision/hearing assessment

   Indicated Intervention(s)

2. Respective Primary Barriers Assessment
   - ROMS Baseline

3. Physical Intervention(s)
   - Physiotherapy
   - Work conditioning
   - Vestibular rehabilitation
   - In home OT
   - Work hardening

   ROMS (Physical) Re-assessment I
   (if intervention occurred for initial primary barriers)

4. Psychological I Intervention
   - Pharmacological
   - Psychological intervention
   - Cognitive behavourial
   - Stress/symptom management counselling

   ROMS Demonstrated Progress

5. Psychological II Intervention
   - Home/community behavioural programming (12-16 weeks)
   - Psychological support

   ROMS Re-Assessment III
   Determine status after Level I Intervention and/or at interim
   - ROMS Demonstrated Minimal/No Progress

6. Occupational Disability Determination (See “Own occ.” & “Any occ.” diagrams)

7. Vocational Rehabilitation/Intervention
   - Counselling support should generally accompany vocational rehabilitation to manage symptom relapse
